

Karlstad International TIME Program

Karlstad International TIME Program is a state of the art upper secondary school program with an emphasized international profile.

TIME is an internationally recognized concept, representing telecommunications, IT, media and entertainment (in

Karlstad entertainment is referring to interactive entertainment).

This educational program is developed through the co-operation between the City of Karlstad, the IT Foundation *Compare* Karlstad, and the University of Karlstad. The program started in August 2004.

Through TIME, new co-operation work forms have been developed, and a wider international perspective has opened a window of opportunities. The TIME-students may choose from a variety of university programs after completing the upper secondary school.

The TIME-program is a powerful investment in youth for the future benefit of all. It provides students with very good skills and knowledge for their university studies within university programs such as Media- and communication science, Computer science or Master of Science in Engineering programs.

The TIME Program is an exiting meeting point for students, teachers, the University of Karlstad and the IT corporations in Karlstad. The program has a very demanding schedule and attracts some of the most motivated and skilled student in our area. The curriculum for the three year program is as follows: (*Turn page*)
